PROBLEM

UNIVERSITAS
GADJAH MADA

Students have multiple assignments (different courses) with different deadlines.

Students may forget assignment deadlines.

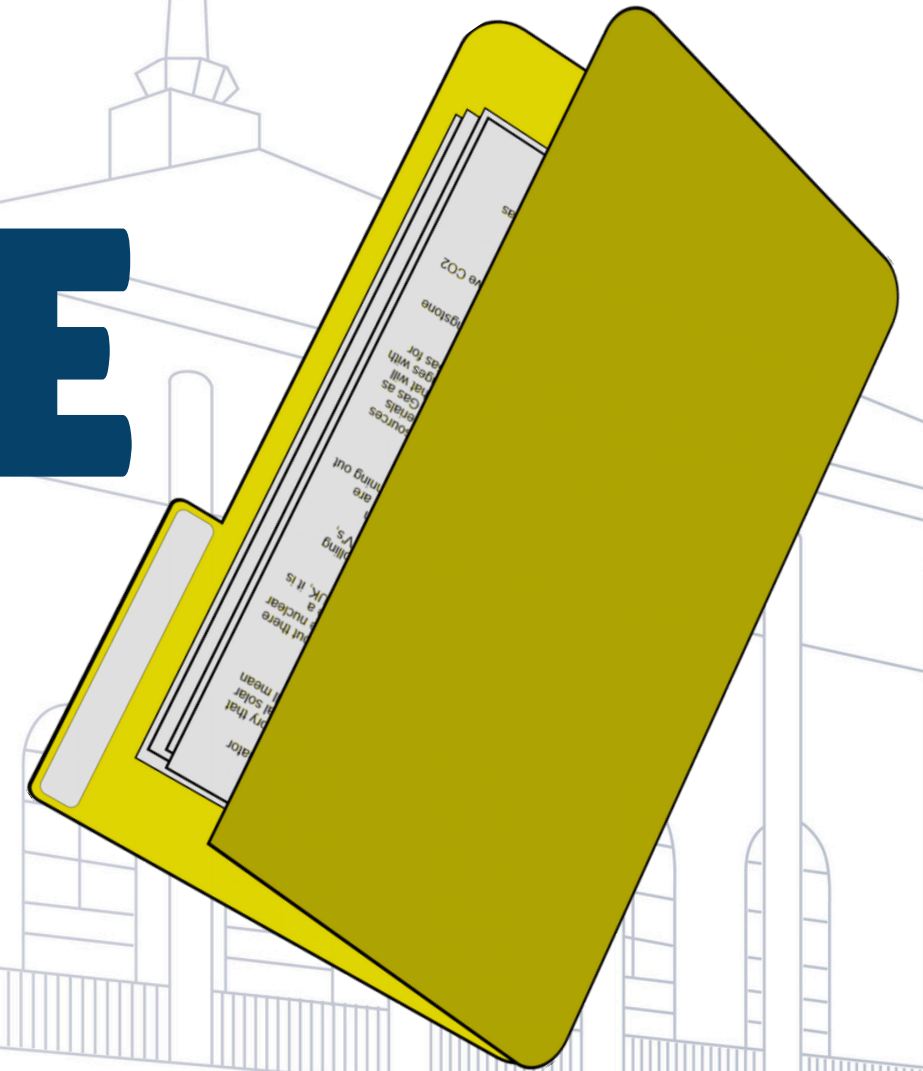

It can be difficult to know which assignment should be prioritized.

UNIVERSITAS
GADJAH MADA

PROJECT OBJECTIVE

PROJECT OBJECTIVE

UNIVERSITAS
GADJAH MADA

The Project objective is overcome the lack of students scheduling, planning, and prioritizing assignment that need to be done

UNIVERSITAS
GADJAH MADA

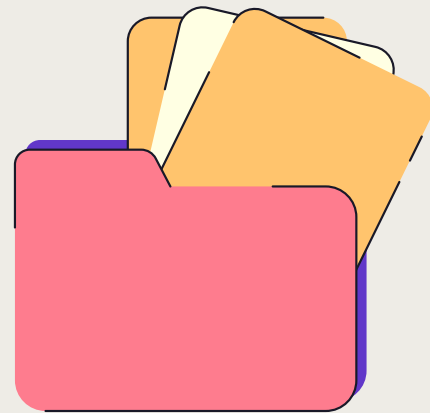

SOLUTION

SOLUTION

UNIVERSITAS
GADJAH MADA

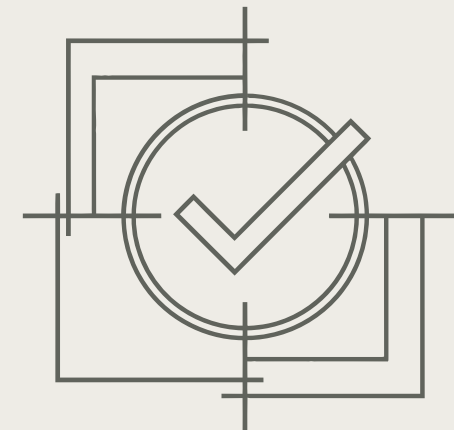

Develop a C++-based Assignment Deadline Manager that allows students to add, view, complete, delete, and organize assignments while storing deadline information for easier task management.

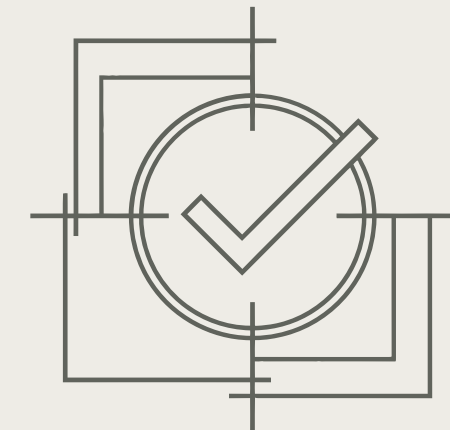

**allows students to add,
view, complete, delete,
and organize assignments**

**Help Student to identify
urgent assignment and
manage their time more
effectively**

**Categorized beased on
their urgency (Red,
Yellow, Green)**

**Categorized beased on
their urgency (Red,
Yellow, Green)**

ALGORITHM

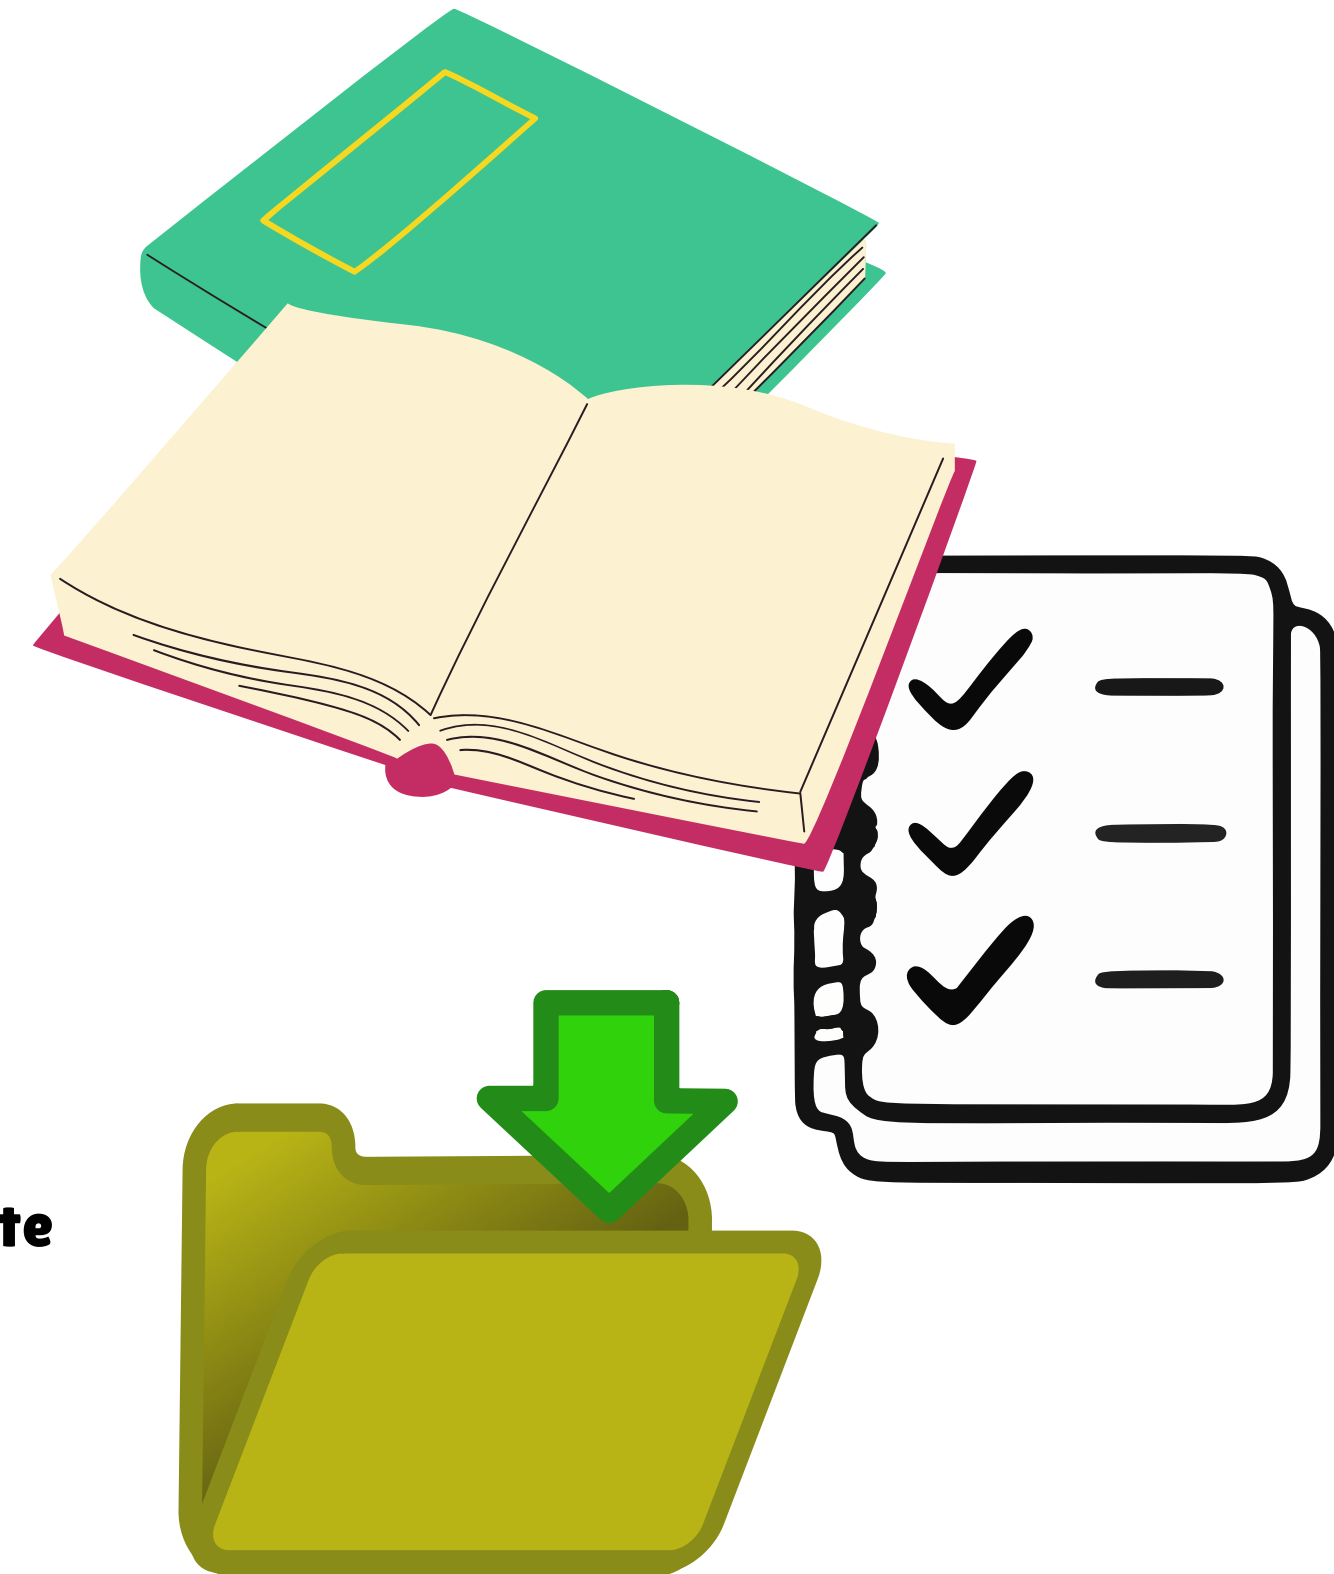

ALGORITHM

UNIVERSITAS
GADJAH MADA

- 1. Start with an empty assignment list.**
- 2. Show the dashboard and menu, then read the user's choice.**
- 3. Add:** ask for the name, days left, deep analysis (Y/N), and number of tasks.
Calculate the urgency and save the assignment.
- 4. View:** show each assignment's status, days left, tasks, and urgency. Show a reminder if it is due today.
- 5. Work on / Complete:** If it is due today, repeat the question "Is it done?" until the user answers Yes, then mark it completed. If days remain, the user chooses to make progress (reset the delay count), delay (add 1 to the delay count, with a warning at 3 or more), or finish (mark it completed).
- 6. Delete:** remove the chosen assignment from the list.
- 7. Pass a Day:** reduce the days left of each unfinished assignment by 1 and recalculate its urgency.
- 8. Exit:** stop the program. Otherwise, go back to step 2.

KEY FEATURES

UNIVERSITAS
GADJAH MADA

Urgency Parameter

Parameter	Indicator	Point/weight
Time	1 – 3 days left	50 points
	4 – 7 days left	30 points
	more than 7 days left	10 points
Depth	Need depth analysis	25 points
	Dont need deeph analysis	0 point
Volume of task	More than 3 Task	25 points
	Less than or equal to 3 Task	0 point

Urgency Points Accumulation = Time + Depth + Volume of task

KEY FEATURES

UNIVERSITAS
GADJAH MADA

Our program will have a feature called “Urgency Classification”:

LOW URGENCY

**Point Accumulation of the
parameter less than 40**

**MODERATE
URGENCY**

Point of the parameter is 40 –70

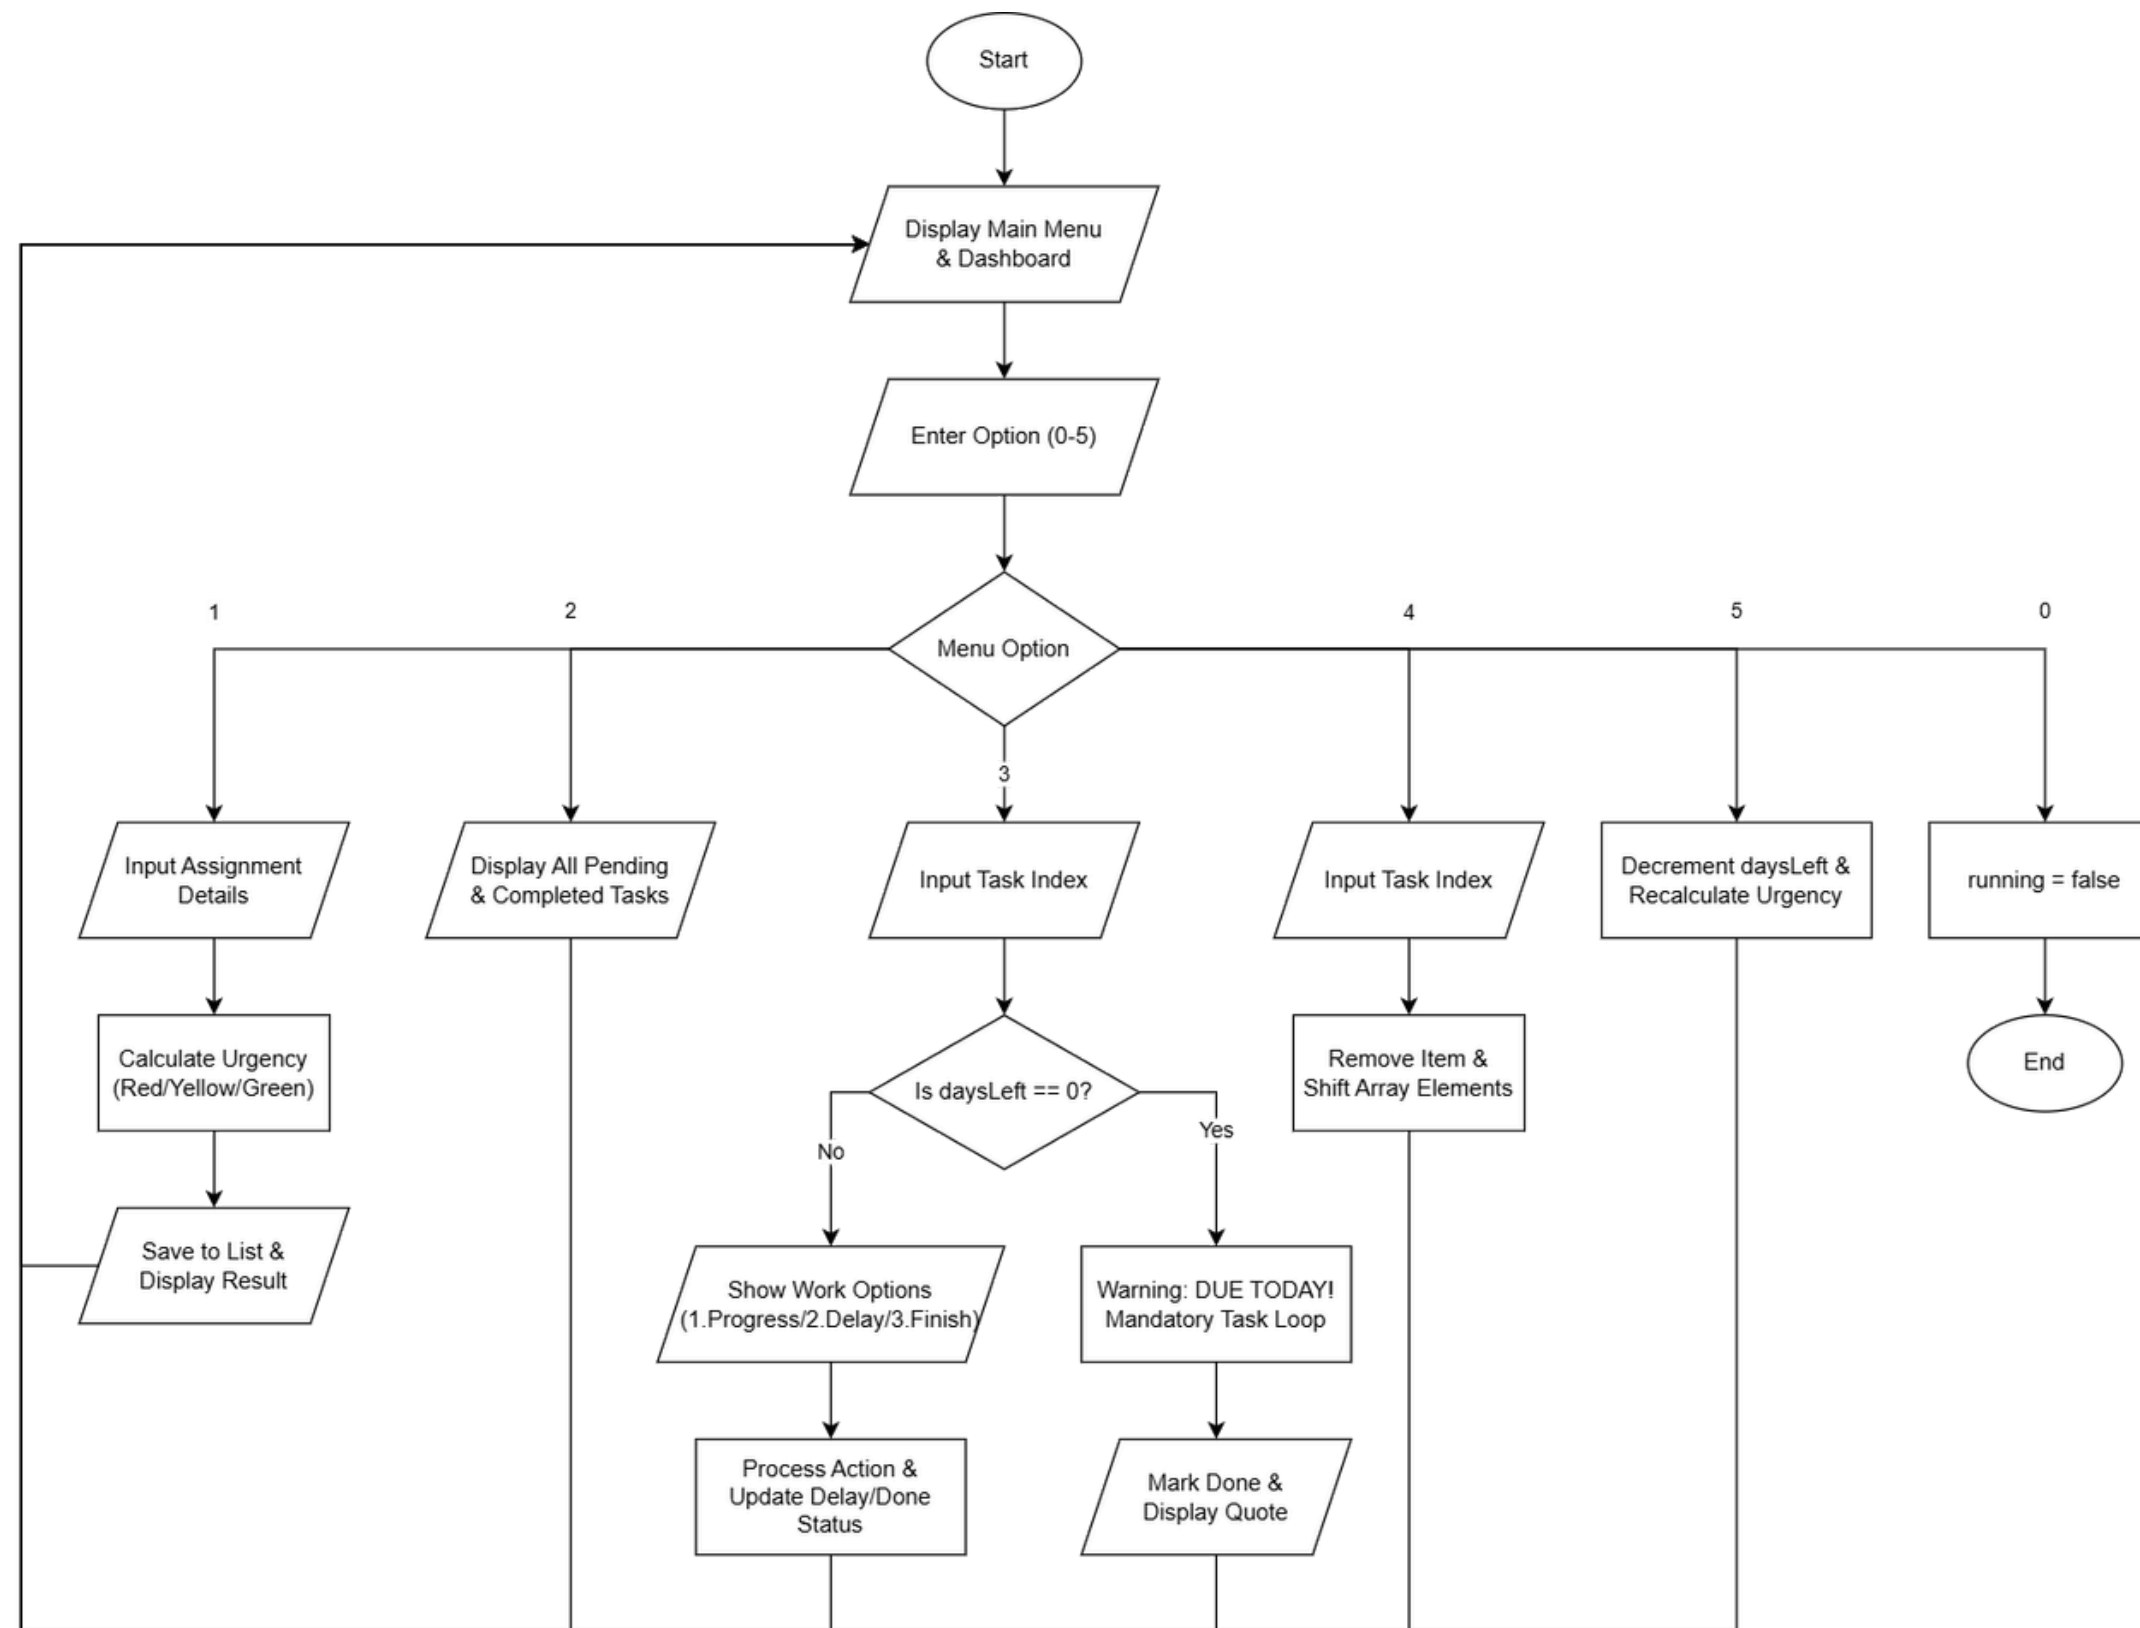

HIGH URGENCY

**Point Accumulation of the
parameter more than 70**

SWOT ANALYSIS

SWOT ANALYSIS

UNIVERSITAS
GADJAH MADA

STRENGTHS

- Help Student to identify urgent assignment and manage their time more effectively
- Acts as a single hub to prevent forgotten assignments

WEAKNESSES

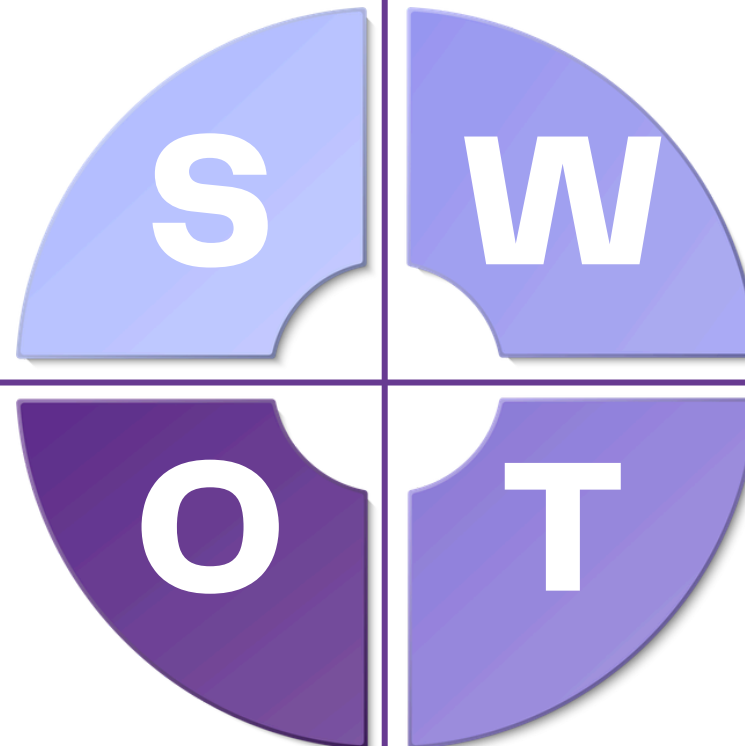

- Dependent on the user consistently adding and updating tasks.
- Program input comes from user which possible to occur human errors when inputing process

OPPORTUNITIES

- The basic structure of this project can be developed to application which can integreted with external calendar

THREATS

- Too many red alerts at once can cause stress and avoidance.

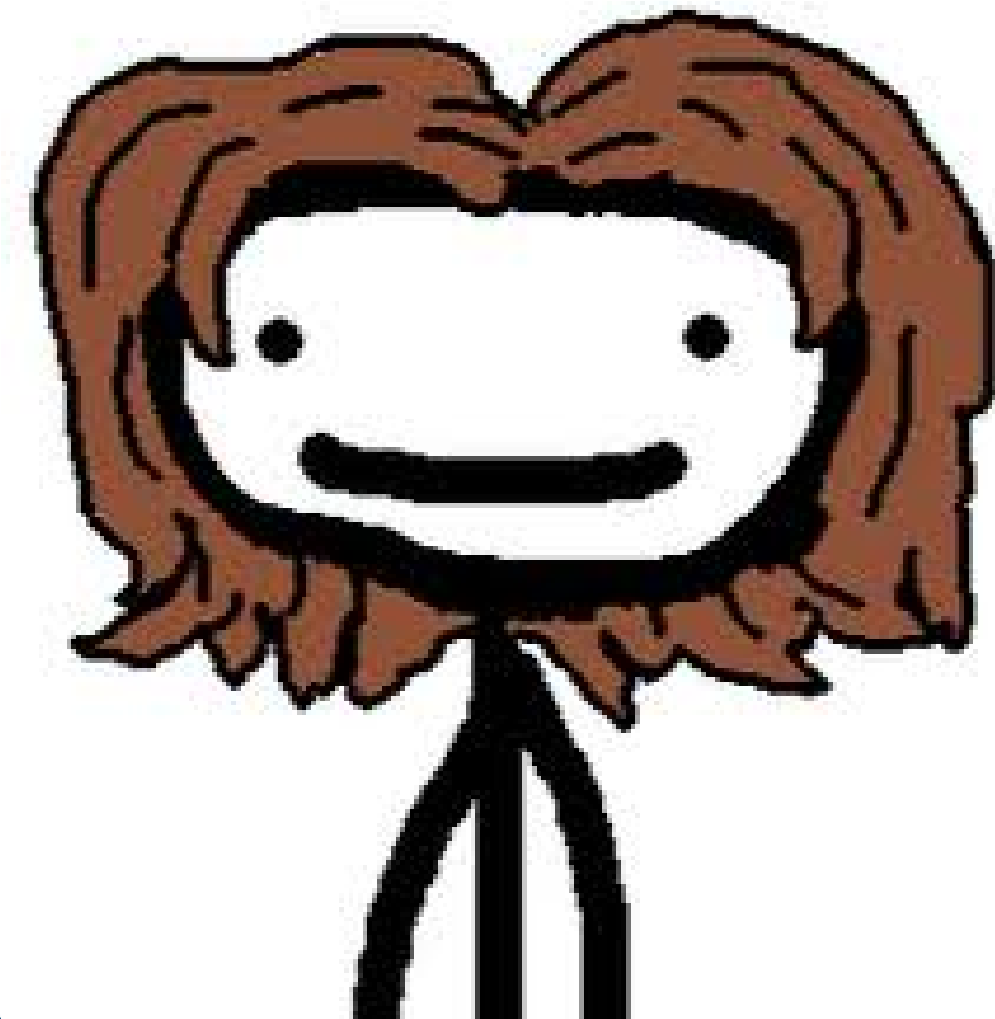

CONCLUSION

UNIVERSITAS
GADJAH MADA

Most students tend to procrastinate and eventually forget that they have assignments due at certain dates.

To combat this, we developed a C++ program that is built to remind the user about their upcoming assignment's deadlines while also guiding them through goal-oriented tracking so that they can submit their assignments on time.
